

CNC mechanical workings

About us

MR Meccanica deals with turning, milling, drilling and tapping of elements of hot-pressed steel, cast iron and non-ferrous material such as aluminum or bronze, on behalf of a third party or on customer's request.

The family business structure, lean and flexible, provides a service that fits the needs of our Customers, allowing to deal with the entire production process: from the supply of raw materials, to machining, from assembly of composite components, to various kinds of surface finishing, as well as transport of the finished product to the Customer. The corporate warehouse provides the ability to manage any stock, and respond with punctuality and elasticity even at extemporaneous orders. The desire to grow and face new challenges with enthusiasm is the basis for the satisfaction of our Customers.

A qualified and constantly updated staff oversees the work, from the selection of equipment up to the post-processing controls; our technical office establishes the processing steps in order to

maximize production efficiency and optimize the tool-paths.

The working tools

MR Meccanica constantly invests in the most advanced means of production and of different types, in order to provide at the same time flexibility and accuracy in manufacturing. Our fleet of machinery includes:

- 1 Mazak VTC-530C Smooth G vertical machining center
- 1 Mazak VTC-20C vertical machining center
- 1 Hyundai WIA F650/50 vertical machining center equipped with fourth axis
- 1 Mazak MULTIPLEX 8200Y three-turret double-spindle turning center with automatic bar feeder
- 2 Takisawa LA-300 and LA-300M horizontal lathes
- 1 Doosan V 450TM double-spindle vertical lathe
- 2 Takisawa EX-110 horizontal lathes
- 2 ATS ZX-1000 horizontal lathes
- 1 Kentai KTC-150SPC disc sawing machine
- 1 RES band sawing machine

Forty years of experience

The firm was founded in 1975 by the will of Renato Moladori to provide its customers with its passion for mechanics; thus it can boast a forty years experience in the field of machining.

Started as an artisan workshop, the MR Meccanica has developed over the years coming to its present location of via Campi Grandi in Prevalle, with an area of 1000 m² which will soon be added a further 1000 m² of the new shed, which is currently dedicated to the storage of raw waiting to be processed. The two surfaces are communicating and both equipped with dedicated forklift to facilitate the loading/unloading operations.
